EDUCATION

Universidad Autónoma de Baja California

B.S. in Software and Emerging Technologies Engineering | GPA 9.6/10.0

Ensenada, BC

Aug 2022 – Jun 2026

WORK EXPERIENCE

PSL Group

Remote

Application Developer Intern | React, Redux Toolkit, TanStack Query, Vite, TypeScript

Mar 2026 – Aug 2026

- Built **DougalEYE Conditions** components shipped to production: prompt bar, side panel, topbar brand fit, cookie banner, feedback modal, and mobile scroll restore across the article round-trip.
- Cut logout from **30s to ~5s** with async teardown and a blocking overlay.
- Fixed DougalEYE answering from the wrong product's content, and an ad slot returning nothing **100% of the time**.
- Added four automated build checks that fail a release when brand assets, themes, translations or config drift.
- Proposed and built automated report delivery on **AWS S3** and CloudFront, and took regression coverage to **95% of the documented test sheet**. A readiness gate and a per-brand matrix cut monthly CI from **94 to 38 minutes**.

EPAM Systems

Remote

Automated Testing Trainee, university-company program | Java, Selenium, TestNG, RestAssured

Oct 2025 – Mar 2026

Tech4Good Research Lab, UABC

Ensenada, BC

Software Developer & Research Assistant | React Native, Supabase, TypeScript

Mar 2025 – Oct 2025

- Sole developer of the **La Brújula del Autismo** rebuild: 20+ screens across auth, institutions and questionnaires.
- Built the questionnaire engine for three clinical autism screening tests, adding new ones by config, not code.
- Designed the normalized PostgreSQL schema, Deno Edge Functions, and row-level security over patient records.
- Presented the project at ENITCI 2025, taking **1st place** in the Engineering & Technological Development division.

PROJECTS

Awita | React, NestJS, Go, AWS Lambda, Serverless, Arduino

Mar 2025 – Present

- Built an IoT water-tank monitor **running in production for over a year**: Arduino sensors post to a Go Lambda ingesting about 1,400 readings/day at **under 100ms**, behind a NestJS API on Serverless and a FastAPI forecasting service.

Stilo | React Native, NestJS, PostgreSQL + pgvector, Gemini, Azure, Terraform

Oct 2025 – Present

- Built the React Native client, the NestJS **GraphQL** API on Prisma, and the Python recommendation service.
- Built the AI outfit engine: an LLM plans the outfit, **pgvector** finds the clothes, composition applies style rules.
- Co-authored the study, **accepted for publication at MexIHC 2026: 83.4% fewer UI interactions, SUS 86.75/100**.

NASA Explorer | NestJS, MongoDB, Vertex AI, Python

Oct 2025

- Built the NestJS backend (chat, history, RAG on **Vertex AI**) and the Python pipeline over 600+ NASA papers.

Havi | React Native, Expo, TypeScript, FastAPI, Gemini

May 2026

- Built the entire mobile app for Hey Banco's datathon in **2 days**: 8 screens, a component library, offline fallback.

HONORS & AWARDS

National Engineering Exit Exam (CENEVAL EGEL-ISOFIT) – Outstanding Performance, highest band

Apr 2026

1st Place (Local) & Global Nominee, NASA Space Apps Challenge

Oct 2025

1st Place, CTRL-Coders Open Competitive Programming Contest

Apr 2025

PROGRAMMING LANGUAGES & TECHNOLOGIES

Languages: TypeScript, JavaScript, Python, Java, Go, C++, SQL

Backend: Node.js, NestJS, REST APIs, GraphQL, FastAPI, Express, PostgreSQL, Supabase, Prisma, Redis

Frontend: React, React Native, Expo, Next.js, Redux Toolkit, TanStack Query, Vite, HTML, CSS, Tailwind

AI & Agents: Claude Code (skills, MCP), OpenCode, Gemini API, Vertex AI, RAG, spec-driven development

Cloud & DevOps: AWS, Azure, Docker, Terraform, GitHub Actions, CI/CD

Testing & Tools: Playwright, Selenium, Vitest, Git, Linux, Jira

LEADERSHIP

CTRL-Coders Competitive Programming Club | Co-Founder

Oct 2024 – May 2026

- Led weekly DSA workshops for 80+ students, prepared ICPC teams, and ran the club's first open contest.
